Below is a grid that has the same number of squares as the floor of your classroom. You are going to use this grid to create a map of your classroom. Make sure each square on your map has the same classroom item as that square in your classroom.

For example, if we move six squares across and six squares up in the classroom, the teacher’s desk is located in that square. Therefore the teacher’s desk has been drawn on the map in the grid that is six squares across and six squares up.

Now it is time to go back to your WebQuest and complete the next step.
